

Jing Xiang Xu

jx466@cornell.edu

115 S Quarry St., Ithaca, NY 14850

cell: 607-882-5108

EDUCATION

Cornell University, College of Engineering, Ithaca, NY

Master of Engineering in Financial Engineering

Expected December 2027

The University of Hong Kong, Hong Kong

Bachelor of Science in Mathematics; Minor in Computer Science; First Class Honors; GPA: 3.74

June 2026

University of Oxford, Oxford, United Kingdom

Visiting Student Program in Mathematics (ROA scholarship)

July 2025

Selected Coursework: Data Structures and Algorithms, Convex Optimization, Machine Learning

SKILLS

Programming: Python, C++, R, SQL, Shell scripting, Git, Linux

Quantitative: Financial Modeling, Portfolio Risk, Factor Analysis, Backtesting, Portfolio Optimization

AI/ML: Prompt engineering, DeepSeek-based classification and reranking, fine-tuning workflows, loop engineering

EXPERIENCE

Quantitative Researcher, *Dymon Asia Capital (HK) Limited*, Hong Kong

May to Aug. 2026

- Researched Hang Seng Composite Index and Hang Seng Tech Index rebalancing rules to predict constituent inclusions and exclusions before official announcements, translating published methodologies into point-in-time eligibility, liquidity, market-capitalization and buffer-selection logic.
- Designed an auditable ranked-waterfall Python pipeline integrating FactSet, Bloomberg, ERD and HKEX filings, including classification gates and a filing-based free-float engine for investment research.
- Achieved an 82.6% action-level hit rate (185 of 224 additions and deletions) across the latest three evaluated HSCI rebalances in leakage-controlled, point-in-time evaluations.

Quantitative Researcher Intern, *Rivermap Company Limited*, Hong Kong

Feb. to Apr. 2026

- Automated thematic stock selection by translating unstructured investment themes into supply-chain dimensions and mapping them to Rivermap's proprietary sector taxonomy.
- Built a Python/Pandas pipeline integrating sector, revenue-segment, and company-description data, generating auditable intermediate outputs and segment-level relevance diagnostics.
- Designed a two-stage semantic retrieval pipeline using BGE embeddings and cosine similarity for candidate generation, followed by DeepSeek-based sector refinement and dimension assignment for ambiguous theme queries.

Quantitative Strategy Analyst Intern, *Nine Martingale Investment Management, Ltd.*, Shanghai

July to Sep. 2025

- Identified a 60-day dividend-event data lag and corrected factor alignment, increasing information coefficient by 0.02.
- Built a factor-backtesting framework; improved annualized return by 6% and Sharpe ratio by 0.3 over five years.
- Analyzed daily exposures to 10 Barra style factors to identify signal characteristics and portfolio style tilts.

Quantitative Strategy Analyst Intern, *Northeast Securities Co., Ltd.*, Shanghai

July to Sep. 2024

- Developed mean-variance and risk parity models within a 15-year daily-rebalanced backtesting framework.
- Implemented a Monte Carlo approach to approximate ERC weights by minimizing differences in asset risk contributions.

PROJECTS

Researcher, *HKU Quant Trading Team*, Hong Kong

Feb. to Aug. 2026

- Analyzed historical Polymarket data to identify systematic differences between market prices and realized outcomes, grouping contracts by topic, market structure, and time to resolution; updated the estimates monthly and identified Yes/No shares with pricing gaps above 3 percentage points.
- Built a Python pipeline that scanned live markets, ranked trading opportunities, enforced position limits, simulated or submitted orders through Polymarket's order book, and tracked resolved trades and realized P&L.

Independent Researcher, *University of Oxford*, Oxford, United Kingdom

Jan. to June 2025

- Modeled Lightning Network channel management as a discounted MDP, deriving optimal on-chain/off-chain routing, liquidity-reset, and channel-capacity policies under stochastic unidirectional and bidirectional payments.
- Implemented value iteration for discrete and exponential payment distributions, demonstrating that bidirectional flows can naturally rebalance liquidity and eliminate costly resets.

ACTIVITIES/INTERESTS

HKU Young Scientist Scheme; F1 racing; Texas Hold'em poker; running
